

Global Economic Indicators Report 2024

This report provides a comprehensive overview of key economic indicators across major world economies. The data has been compiled from World Bank, IMF, and OECD sources.

Section 1: GDP and Population Overview

The table below presents gross domestic product figures alongside population statistics for the ten largest economies globally. All GDP figures are expressed in current US dollars.

Country	GDP (USD Trillion)	Population (M)	GDP per Capita
United States	27.4	335	81,800
China	17.7	1,410	12,500
Germany	4.5	84	53,500
Japan	4.2	124	33,800
India	3.7	1,430	2,600
United Kingdom	3.1	68	45,600
France	3.0	68	44,100
Brazil	2.1	215	9,800
Türkiye	1.1	85	12,900
South Korea	1.7	52	32,700

Key Observations

The United States maintains its position as the world's largest economy with a GDP of 27.4 trillion USD, representing approximately 25% of global output. China follows as the second-largest economy, though its GDP per capita remains significantly lower due to its massive population base.

European economies, particularly Germany and France, demonstrate strong performance in GDP per capita metrics. The United Kingdom, despite its exit from the European Union, continues to rank among the top ten global economies.

Emerging markets such as India and Brazil show strong absolute GDP figures but lower per capita metrics, indicating significant room for growth as these economies continue to develop.

Section 2: Quarterly Growth Rates

Quarterly GDP growth rates reflect the pace of economic expansion across reporting periods. Germany experienced mild contraction in Q2, while India consistently maintained the highest growth trajectory.

Economy	Q1 2024	Q2 2024	Q3 2024	Q4 2024 (est.)
United States	3.4%	2.8%	3.1%	2.9%
China	5.3%	4.7%	4.6%	4.8%
Germany	0.2%	-0.1%	0.3%	0.5%
Japan	0.9%	-0.6%	0.7%	1.1%
India	7.8%	6.9%	7.2%	7.0%
Türkiye	5.7%	3.1%	2.8%	3.2%

Conclusion

Global economic conditions in 2024 have been characterized by resilient growth in the United States and India, moderate recovery in Europe, and sustained expansion in China above the five percent target. Inflationary pressures have eased across most major economies, allowing central banks to begin monetary easing cycles.

The International Monetary Fund projects global GDP growth of 3.2 percent for 2024 and 3.3 percent for 2025, broadly in line with the long-term average. Downside risks include geopolitical tensions, commodity price volatility, and the lingering effects of post-pandemic supply chain disruptions.
